

Environmental Policy

May 2025 reviewed

Next review May 2026

1. The Council recognises its operations impact on the environment in a number of ways and is committed to identifying, monitoring, and reducing such impact.
2. In addition, its duties enable it to protect and at times enhance the local environment both directly and by influencing others. The Council will make best use of its position and powers to do this.
3. The Council will embrace the concept of sustainability and acknowledge the need to reconcile environmental, social, and economic demands.
4. The Council will undertake periodic audits to ensure up-to-date assessments of environmental impacts are maintained and the progress of action plans are monitored. It will subsequently measure the organisation's carbon footprint and take the necessary actions to reduce it.
5. The Council will ensure that councillors and employees receive training to enable them to understand and control the environmental effects of their work.
6. The Council will comply with all relevant legislation.
7. Where appropriate the Council will require its suppliers to provide assessments of their environmental impacts and life cycle analysis of major products.
8. The Council will have regard for both the natural and built environments and will strive to protect and where possible enhance them.
9. The Council will manage energy with a view to minimising its consumption.
10. The Council will ensure its operations minimise pollution of land, water, and air.
11. The Council will seek to minimise waste, re-use or recycle where possible and ensure disposal has the minimum environmental impact.
12. The Council will support efforts to make the town sustainable, by working with like-minded community groups and Wiltshire Council and will investigate the "transition town" approach.
